

Client Case Study

“We needed a reliable and flexible system that would grow with our business and adapt to our changing requirements. What’s more, we needed the best and most experienced people to implement and support our system.”

Pamela Icasiano,
Group Financial Controller,
Save the Children Australia.

Save the Children Australia

Save the Children is a non-profit organisation with an international network of 27 organisations’ that carry out national and overseas programs for children in over 110 countries. Save the Children Australia is a member of the International Save the Children Alliance which promotes and supports development in sectors such as Health, Education, Survival, Protection and Youth Participation.

Challenge

- Simplified recording and reporting was required at a local level combined with complex reporting at a head office level.
- Save the Children required a Multicurrency function combined with consolidation.
- The software had to be user friendly and flexible enough to be used in third world countries.
- A long term Business Partner was needed who would be able to offer support by being available to implement and support systems in different regions.

Solution

- Sage Accpac ERP with General Ledger, Accounts Payable, Accounts Receivable, Multi-Currency and General Ledger Consolidations.

Achievements

- The stability and integrity of a common accounting package combined with high audit ability, aided in transparent financial tracking.
- Due to the large number of accounts across the regions and at head office, Save the Children benefited from the ability to automate new account creation and subsequently map these accounts to head office requirements.
- A shared report format across all regions made results more comparable and easier to obtain.

At a Glance:

Key Challenge: The complexity of multi-region operations – reporting, multicurrency, consolidation and support requirements required a flexible system and a long term business partner to support it.

Key Achievement: The stability and integrity of a common accounting package combined with the capacity to automate the creation of new accounts and the ability to use a shared report format across all regions made results more comparable and easier to obtain.
